

All companies and organisations need data storage systems to allow day-to-day operation. All data need to be stored somewhere, whether it's e-mail, document, audio, video, database, file sharing, personal data, or company data. Centralised, resilient, highly available, data storage is critical for optimised functionality of all successful organisations. With the growth of network access speed data can be stored and accessed more dynamically with high resiliency and wide reachability.

Our solution

Ocuro can provide storage facilities in data centres across many major cities with multi terabytes of storage capacity. Our storage facilities are interconnected to high speed transport networks to serve your needs.

We maintains strong relation with regional network service providers, we can give you wide reachability by interconnecting our storage network with multiple service providers in a seamless manner, allowing you simple storage access and removing any complexity of managing infrastructure.

Summary

- We can provide data storage space in data centres customised to your needs.
- Our data centres have multi terabit network infrastructure to meet your storage access requirements.
- Where necessary we can extend our network access infrastructure to give you wider reachability.
- Our close relation with regional service providers allows us to give you wide access.
- We provide proactive network management with single point of contact for quick resolution of service effecting issues.
- Our services are offered with strict Service Level Agreement for throughput, latency, and availability.
