

From the very smallest organisation to the largest multinational companies depend on the Internet for day to day activity. For many large organisations, continuous and reliable access to the Internet is fundamental to their operation, disconnection from the internet for a short period of time can result in financial loss.

With the convergence of data, voice, and video, many new types of service offerings such as hosted VoIP, video conferencing, as well as traditional data communication services including web hosting, emails, transactional data, company VPN access, are all using the same underlying physical infrastructure to connect to the Internet, with increasing demand on local access bandwidth, reliability, and availability. To serve this need Ocuro is continuously optimising local access solutions for performance and costs reduction for our customers.

Our solution

We can provide managed local access connectivity to the Internet utilising a wide range of technology to meet the needs of our customers.

We peer and maintain strong relation with regional network service providers, we are able to provide cost effective access solution to our customers using the best available points of presence ensuring service reliability, availability and carrier diversity, with strict Service Level Agreement.

We can present connection speed from 2Mbps to 1Gbps in most locations and up to 10Gbps in major cities. If higher speed is needed we can customise to meet our customer' s needs.

Summary

- Bandwidth of 2Mbps to 10Gbps can be provided. For higher bandwidth requirement customised access infrastructure can be installed.
- Our standard presentation is Ethernet, we can also present circuits in the following formats: E1, E3, DS3, STM-1, STM-4, STM-16, STM-64, 2.5Gbps Wavelength, and 10Gbps Wavelength, LAN-PHY, WAN-PHY.
- Services that require high availability we can provide protected diversely routed service connecting to separate carriers.
- Our close relation with regional service providers allows us to give you cost effective wide reach.
- We provide proactive network management with single point of contact for quick resolution of service effecting issues.
